

FULFLEX

ELASTOMERICS WORLDWIDE

Founded in 1932, Fulflex is a key subsidiary of the Moore Company of Rhode Island, a private family owned American company with businesses in Textiles, Elastics ; Flexo materials and moulded products for the Boat Industry.

Fulflex Elastomerics Worlwide manufactures natural and synthetic elastic tapes and threads for Consumer Disposables including Baby Diapers and Adult Incontinence products; Consumer products from Golf Balls to Toys ; a wide range of Textile Apparel products and Medical & Healthcare products including Caps, Gowns, Bandages and Protective Clothing.

Fulflex elastics are available in any width, length and colour; in single and multi end construction and in packaging configurations of boxes; spools and rolls. Individual boxes can be delivered pre-spliced on the pallet to allow continuous production without intervention of the line operators.

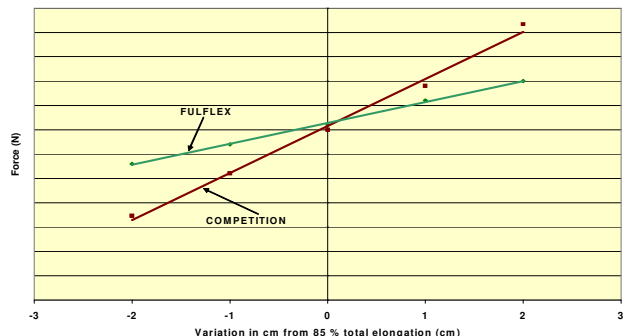

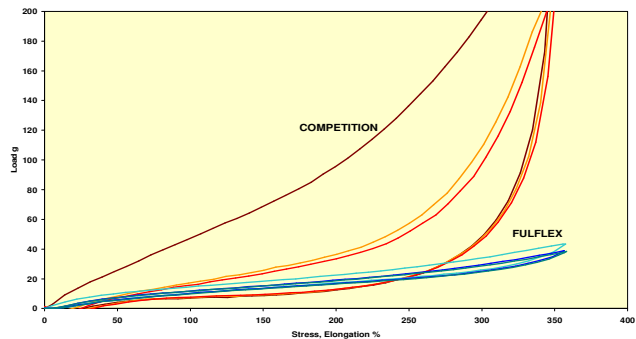

Fulflex provides comprehensive global coverage from its worldwide manufacturing and distribution facilities in Singapore, Luxembourg and USA.

Fully synthetic polymeric threads and tapes are free of proteins and have passed eye and skin non-irritation tests at the French Institut Pasteur. The extremely low hysteresis loss and flat-strain behavior of Fulflex elastic allow it to be installed at high elongations over 350 % without causing red-marking or having a negative impact on the leakage behavior of the diaper.

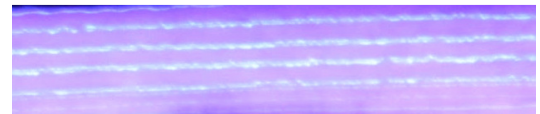

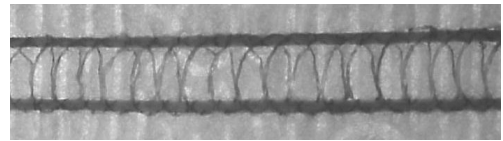

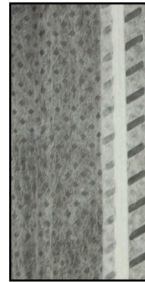

These characteristics provide a forgiving material capable of withstanding any unexpected process change and giving the best possible diaper fit to different leg dimensions. Post aging change of force in the diaper is minimized compared to alternative elastic materials.

Fulflex elastics are manufactured using continuous on-line control at an elongation above the customer's processing conditions resulting in an excellent runnability with a stop level in the range of 1 stop per million diapers produced.

Fulflex elastics can be processed on existing equipment without modification of the lines. Additional splitting units necessary to optimize runnability are available on request.

Fulflex materials are compatible with most elastic specific and multi-purpose adhesives and all contact and contact-free adhesive application technologies as well as with adhesive free ultrasonic technologies.

Fulflex supports existing and new customers with a complete service package including technical assistance for the start-up of new materials; line audits to optimize runnability; comparative cost studies of diaper elastication and specific engineering solutions for smooth conversion of any elastic option to Fulflex material.

Fulflex Diaper elastic is compatible with all existing and new diaper manufacturing equipment and provides a cost efficient solution to all customers requirements.

Fulflex is the best elastic option for disposable diapers.
